                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of a single chain Fv (scFv) derivative cof antibody 193/K2, comprising the heavy (VH) and light (VL) chain variable regions of 193/K2 joined by an artificial, flexible linker competite. The scFv was obtained by PCR amplification of CDNAs for 193/K2 VH and VL regions and cloning in vector pDAP2. 193/K2 is completed anti-human Factor IX (FIX)/activated Factor IX (FIX) antibodies of the invention. Anti-FIX/FIX and their derivatives, completed for the invention activity. Administration leads to an increase in the proceagulant activity. Administration leads to an compression of FVIII a inhibitors. This allows for rapid blood coagulation even completed by the absence of FVIII or FVIII, and in the case of FVIII or FVIII or FVIII or FVIII and composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

CC affinity to the angiogenin or its fragment in Combination with human CC derived polypeptide regions (e.g. mouse monoclonal antibody 26-2F). CC Also included are an expression vector comprising a nucleic acid cenoding the antibody and a host cell transformed with the vector. CC enciding the antibody and a host cell transformed with the vector. CC the antibody or its fragment is useful for inhibiting a tumour in the antibody and the ability of reducing or eliminating a tumour cc discasses mediated by angiogenesis, reducing or eliminating a tumour cc with abnormal or unwanted angiogenesis, including cancer, and other cdiscasses mediated by angiogenesis, including contar neovascular disease. CC diseases associated with corneal neovascularisation including epidemic cc terpication, neovascular glaucoma and retrolental fibroplasia, and other cdiseases associated with corneal neovascularisation including epidemic cc terpic keratitis, vitamin A deficiency, contact lens overwear, cc atopic keratitis, vitamin A deficiency, contact lens overwear, cc atopic keratitis, superior limbic keratitis, bacterial ulcers, for processon infections, kaposi s sarcoma, Mooren ulcer, rheumatoid carhititis, polyarteritis, trauma, Wegener's sarcoidosis, Soleritis, contact ed with retinal/choroidal neovascularisation include macular cc associated with retinal/choroidal neovascularisation include macular cc mycobacterial infections, Bechets disease, trauma, osteoarthritis, contact elemente disease, graft versus host disease, multiple crejection, autoimmune diseases such as type I disbetes, multiple creptional artichal gravis. The heavy chain variable region of mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibody immunologically reactive to angiogenin useful for inhibiting angiogenesis and for treating conditions associated abnormal angiogenesis e.g. cancer, ocular neovascular disease, rheumatoid arthritis

                   The present sequence is the protein sequence of the heavy chain variable region (VH) of the murine monoclonal antibody SWLA3 (IgG), which binds specifically to the surface antigens of cariogenic type c streptococcus mutans (ATCC 25175). The monoclonal antibody is produced by SWLA3 (ATCC HB 12558) hybridoma cells. In an example from the invention, chimeric monoclonal antibody TEFE was produced comprising SWLA3 variable regions and human antibody constant regions. Such chimeric monoclonal antibodies can be used to prevent or treat dental caries in humans. The antibodies engage the effector apparatus of the human immune system when they bind cariogenic organisms, resulting in their destruction. The chimeric antibodies may be produced in edible plants, in transgenic animals,
                                                                                                                                                                                                                                                                                                                                                                                                                Treatment and prevention of dental caries in mammals, in particular humans by orally administering genetically engineered or purified antibodies that bind to surface antigens of cariogenic organisms -

--
```

The present sequence is that of a chimeric construct composed of the antimicrobial peptide dhvar1 (see also ABP72291) joined via a peptide linker to the heavy chain variable region of SWLA3, a monoclonal antibody made against the cariogenic organism, Streptococcus mutans. The chimeric construct shows antimicrobial activity toward S. mutans strains ATCC 25175, LMT and OMZ175, but not against a range of other oral bacterial strains. It is an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         example of chimeric constructs of the invention which generally comprise a targeting molety that recognises a target microorganism, and an antimicrobial peptide. Claimed compositions comprising the chimeric constructs are useful for treating microbial infections or diseases, e.g. on mucosal surfaces such as mouth, vagina, gastrointestinal tract, or cesophageal tract, caused by bacteria, rickettsia, fungi, yeasts, protozoa or parasites.
                                                                    A composition comprising a targeting moiety and an anti-microbial peptide moiety, useful for treating microbial infections, e.g. on mucosal surfaces, caused by bacteria, rickettsia, fungi, yeasts,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Histatin 5; anticaries.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of a chimeric construct composed of the antimicrobial peptide histatin 5 (see also ABP72290) joined via a peptide liker to the heavy chain variable region of SWLA3, a commoncolonal antibody made against the cariogenic organism, the construct shows antimicrobial streptococcus mutans. The chimeric construct shows antimicrobial activity toward S. mutans strains ATCC 25175, LN7 and OMZ175, but not against a range of other oxal bacterial strains. It is an example of chimeric constructs of the invention which generally comprise a targeting molety that recognises a target microorganism, and an antimicrobial peptide. Claimed compositions comprising the chimeric constructs are useful for treating microbial infections or diseases, e.g. on mucosal surfaces such as mouth, vagina, gastrointestinal tract, or oesophageal tract, caused by bacteria, or rickettsia, fungi, yeasts, protozoa or parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches 105;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC affinity to the angiogenin or its fragment in combination with human derived polypeptide regions (e.g. mouse monoclonal antibody 26-2F). CC Also included are an expression vector comprising a nucleic acid CC encoding the antibody and a host cell transformed with the vector. CC The antibody or its fragment is useful for inhibiting the angiogenic activity of angiogenin. The antibody is useful for treating a tumour in thumans, by inhibiting, prohibiting, reducing or eliminating a tumour CC growth, or inhibiting the ability of circulating tumour cell to form a creating a tumour growth, or inhibiting the ability of circulating tumour cell to form a creating a tumour ccl with abnormal or unwanted angiogenesis, including cancer, and other creating attraction and control of seases mediated by angiogenesis, including cancer, and other creations associated with corneal prefit creations, and other creations associated with corneal neovascularisation including epidemic keraticis, upcrior limbic keratitis, syphilis, mycobacteria creations, lipid degeneration, chemical burns, bacterial ulcers, fargosi's sarcoma, Mooren ulcer, rheumatoid creations, contact lens coverweat, cc fungal ulcers, herpes simplex infections, herpes zoster infections, fargosi's sarcoma, Mooren ulcer, rheumatoid creations, contact with retinal/choroidal neovascularisation include macular degeneration, sickle cell anaemia, sarcoid, Paget's disease, Scleritis, cc associated with retinal/choroidal neovascularisation include macular rejection, autoimmune diseases such as type I diabetes, multiple collections, becheet disease, transplant creationy systemic lungua erythematosus, and myasthenia gravis. The present sequence represents the MOOY mutant of the mouse monoclonal constituted by the indexer using the sequence appearing as ANIT6122 and the creation in the specification but was the creation of the mouse monoclonal created by the indexer using the sequence appearing as ANIT6122 and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                     맑
                                                                                                                                    Ş
                                                                                                                                                                                                                                             CC necrosis factor (TNF)-related apoptosis-inducing ligand (TRAII) receptor CC DR5 (located on chromosome 8p21-22). The antibody has apoptosis-inducing CC activity to a cell expressing DR5 in vivo. It is also useful for CC preparing a therapeutic for selective apoptosis of abnormal or CC preparing a therapeutic for inhibiting cell proliferation in a cell, CC preferably a human breast, ovary, colon, haematopoletic, prostate, CC lymphatic, lung, glioma or liver cancer cell. A therapeutic agent may CC also be administered e.g. paclitaxel, taxol or cycloheximide. The CC antibody is used to treat an autoimmune disease, systemic lupus CC erythematosus, Hashimoto's disease, rheumatod arthritis, CC graft-versus-host disease, Sjogren's syndrome, Chron's disease, syndrome, CC pernicious anaemia, Addison disease, selexoderma, Goodpasture's syndrome, CC glomerular nephritis anaemia, sterrility, myasthenia gravis, multiple CC selerosis, Basedow's disease, insulin-dependent disbetes mellitus, CC glomerular nephritis, hypoplastic anaemia, rejection after organ CC covary, lymphatic or breast tissue. This sequence shows one of the invention.

An antibody of the invention has osteopathic, antipsoriatic, antidiabetic, antiarthritic, antiinflammatory, cytostatic, antipsoriatic, antidiabetic, and neuroprotective activity. The polynucleotides encoding the antibodies of the invention may have a use in gene therapy. The antibodies and polypeptides are useful for treating or preventing osteopathic diseases, such as rheumatoid arrhritis, osteoporosis, metastatic and primary bone cancer, wear debris induced osteolysis or osteoarthritis, and immune diseases such as psoriasis, insulin-dependent diabetes, inflammatory bowel disease or multiple sclerosis. The present sequence represents the heavy chain variable region of the murine monoclonal antibody 14F3 of the invention. The sequence contains three complementary determining regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   bone cancer; osteolysis; osteoarthritis; immune disease; psoriasis; insulin-dependent diabetes; inflammatory bowel disease; multiple sclerosis; heavy chain variable region;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mouse:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Murine antibody 14F3 heavy chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          21-MAR-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
```

The invention relates to an antibody immunologically reactive to angiogenin or a fragment of angiogenin comprising light and heavy chain nonhuman-derived complementarity determining regions having a binding affinity to the angiogenin or its fragment in combination with human derived polypeptide regions (e.g. mouse monoclonal antibody 26-27). Also included are an expression vector comprising a nucleic acid

encoding

the antibody

and a host cell transformed

with the vector.

The antibody is useful for treating a tumour in CC humans, by inhibiting, prohibiting, reducing or eliminating a tumour CC growth, or inhibiting the ability of circulating tumour cell to form a CC vascularised tumour mass. The antibody is useful for treating a mammal CC with abnormal or unwanted angiogenesis, including cancer, and other CC diseases mediated by angiogenesis, including coular neovascular disease, crisection, neovascular glaucoma and retrolental fibroplasia, and other CC diseases associated with corneal neovascularisation including epidemic CC keratoconjuctivitis, vitamin A deficiency, contact lens overwear, CC atopic keratitis, superior limbic keratitis, syphilis, mycobacteria infections, lipid degeneration, chemical burns, bacterial ulcers, congal ulcers, herpes simplex infections, herpes zoster infections, CC protozoan infections, Kaposi's sarcoad, Mooren ulcer, rheumatoid CC arthritis, polyarteritis, trauma, Megener's sarcoidosis, Scleritis, CC steven Johnson's disease, and corneal graph rejection. Diseases CC associated with retinal/choroidal neovascularisation include macular degeneration, sickle cell anaemia, sarcoid, Paget's disease, CC associated with retinal/choroidal neovascularisation include macular rejection, sickle cell anaemia, sarcoid, Paget's disease, transplant CC created by the indexer using the E597 mutant of the mouse monoclonal CC antibody 26-28 light chain variable region.

CC clerosis, systemic lupus erythematosus, and myasthenia gravis. The created by the indexer using the sequence appearing as AAD76122 and the CC information in the claims.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

CC necrosis factor (TNP)-related apoptosis inducing ligand (TRAII) receptor CC DR5 (located on chromosome Bp21-22). The antibody has apoptosis-inducing CC activity to a cell expressing DR5 in vivo. It is also useful for CC preparing a therapeutic for selective apoptosis of abnormal or CC dysregulated cells, and for inhibiting cell proliferation in a cell, preferably a human breast, ovary, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, prostate, colon, haematopoietic, cardiomyopathy, coloneximal haematopoietic, prostate, liver, coloneximal haematopoietic, prostate, liver, covary, lymphatic or breast tissue. Peptides used to design primers for colating heavy and light chain cona of the mouse Trail (AAU72801) and colon, the mouse trail (AAU72801), TRA-8 are shown in AAU72799 and AAU72800.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel antibody specific for tumour necrosis factor-related apoptosis-inducing ligand, useful for inhibiting cell proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes a novel antibody which recognizes a tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 26; Page 198-199; 229pp; English.

                                                                                                                                                                                                                                                                  The present sequence is that of a single chain FV (scFV) derivative of antibody 198/A1, comprising the heavy (VI) and light (VI) chain variable regions of 198/A1 joined by an artificial, flexible linker peptide. The scFV was obtained by PCR amplification of cDNAs for 198/A1 VH and VL regions and cloning in vector pDAP2. 198/A1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIXA) antibodies of the invention. Anti-FIX/FIXa and their derivatives, including scFV and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity. Administration leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIII or FVIIIa, and in the case of FVIII or FVIII and in the case of FVIII or FVIII and in the case of FVIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New factor IX/factor IXa antibodies and their derivatives useful for increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis

```

The present sequence is that of a fusion protein comprising: a PelB leader; a single chain Fv (6cFv) derivative of antibody 198/B1 comprising the heavy (VH) and light (VL) chain variable regions of 198/B1 joined by an artificial, flexible linker peptide; a spacer; a Myc-tag peptide; a spacer; and a C-terminal 6His affinity tail.
198/B1 is an example of anti-human Factor IX (FIXA) antibodies and IX (FIXA) antibodies of the invention. Anti-FIX/FIXA antibodies and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              their derivatives, including scFv fragments, have FVIIIa cofactor activity or FNX activating activity. Administration leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII inhibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis. The scFv-myc-tag fusion was expressed in B. coli. It exhibited FVIII-like activity.
                                                                                                                                                                                                                                                                                                                                                                     Chimeric -

                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a bivalent miniantibody comprising CC a PelB leader peptide, the single chain Fv (scFv) fragment of antibody 198/B1 (subclone AB2), an amphipathic helical structure CC and a C-terminal GHIs tag. The protein was expressed in Escherichia coli from plasmid pZip198AB2#102 (see AAF30728). Antibody 198/B1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) antibodies of the invention. CC Anti-FIX/FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence CC of FVIIIa inhibitors. This allows for rapid blood coagulation even CC in the absence of FVIII or FVIIIa, and in the case of FVIII or FVIII or FVIIIa inhibitors. The antibodies and derivatives are used in a CC inhibitor patients. The antibodies and derivatives are used in a CC claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemoxrhagic continty. The bivalent miniantibody exhibited FVIII-like

Anti-FIX/FIXa antibody 198/B1-alkaline phosphatase fusion

21-JUN-2001 AAB20437;

(first entry)

```
The present sequence is that of a fusion protein comprising: a PelB cleader; a single chain Fv (scFv) derivative of antibody 198/B1 comprising the heavy (VH) and light (VL) chain variable regions of 198/B1 joined by an artificial, flexible linker peptide; a spacer; Escherichia coli alkaline phosphatase; and a C-terminal 6His affinity tail. 198/B1 is an example of anti-human Factor IX (FIX)/activated Factor IX (FIX) antibodies of the invention. Anti-FIX/FIXa antibodies and their derivatives, including scFv fragments, have FVIIIa cofactor activity or FIXa activating activity. Administration leads to an increase in the procoagulant activity of FIXa, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIa, and in the case of FVIII hibitor patients. The antibodies and derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemornhagic diathesis. The scFv-alkaline phosphatase was expressed in E. coli. It exhibited continued the scFv-alkaline phosphatase was expressed in E. coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric

                   of the variable domain of an antibody for detection, immunotherapy or for scintigraphs. The peptides of the invention are used in a method to detect analytes in a sample by eliminating interference in the sample. AAY51254-Y51267 represent peptides derived from the framework regions of the variable domain of an antibody which are used to illustrate the method of the invention.

Patent No. US20020010320A1

GENERAL INFORMATION:
APPLICANT: Fett, James W

TITLE OF INVENTION: Chimeric and Humanized Antibodies to Angiogenin
FILE REFERENCE: 10498/74073

CURRENT APPLICATION NUMBER: US/09/286,240

CURRENT FILING DATE: 1999-04-05

NUMBER OF SEQ ID NOS: 25

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 4

LENGTH: 140

TYPE: PRT

ORGANISM: Mus musculus
